

Assignment Day - 2

1. Draw a labeled diagram of an ATX motherboard and mark at least 8 different slots and ports (such as RAM slots, PCIe slots, SATA ports, USB headers, CPU socket, power connector, etc.).

2. Research and list 3 popular CPU socket types (for example: LGA1151, AM4, LGA1200) and name one compatible CPU model for each.

CPU Socket Type	Compatible CPU Model
LGA1151	Intel Core i7-9700K
AM4	AMD Ryzen 5 3600
LGA1200	Intel Core i5-10400

1. **LGA1151** – An Intel CPU socket used in 6th, 7th, 8th, and 9th Generation Intel Core processors.

Compatible CPU: Intel Core i7-9700K

2. **AM4** – An AMD CPU socket that supports Ryzen processors from the 1st to 5th generation (with compatible motherboards/BIOS updates).

Compatible CPU: AMD Ryzen 5 3600

3. **LGA1200** – An Intel CPU socket designed for 10th and 11th Generation Intel Core processors.

Compatible CPU: Intel Core i5-10400

3. Explain in your own words the primary functions of the CPU and the chipset on a motherboard, and describe how they work together when you open a music app like Spotify.

- **CPU (Central Processing Unit):** The CPU is the brain of the computer. It processes instruction, perform calculation, and controls the execution of programs. When you open Spotify, the CPU loads the application, runs its code, and manages tasks such as playing music and responding to your clicks.
- **Chipset:** The chipset is a group of controller chips on the motherboard that manages communication between the CPU and other hardware components, such as RAM, storage (HDD, SSD), USB ports, audio devices.

- **Working Together (When open Spotify app)**

1. Open a Spotify app
2. The CPU receive the command and starts the application.
3. The Chipset helps to CPU access the program files from the SSD/HDD and transfer data through the motherboard.
4. The CPU loads Spotify into RAM and runs the application.
5. When you play a song, the chipset helps to communicate with the audio hardware and network and network, while the CPU processes the music playback the music playback and user commands.

4. Find a clear photo of a real motherboard (from the internet or your own device), and identify at least 5 different ports or slots by circling them and labeling each one.
