

Assignment Day – 5 (OS)

1. On your Windows laptop or PC, open 'System Information' and take a screenshot showing your OS version, processor, and RAM details.

The screenshot shows the Windows System Information window. The left sidebar has a tree view with 'System Summary' selected. The main pane displays a list of system items and their values. Key details include: OS Name (Microsoft Windows 11 Home Single Language), Version (10.0.26200 Build 26200), Processor (12th Gen Intel(R) Core(TM) i5-12450H), and RAM details (Total Physical Memory: 7.65 GB, Available Physical Memory: 627 MB, Total Virtual Memory: 17.6 GB, Available Virtual Memory: 9.58 GB).

Item	Value
OS Name	Microsoft Windows 11 Home Single Language
Version	10.0.26200 Build 26200
Other OS Description	Not Available
OS Manufacturer	Microsoft Corporation
System Name	RAHUL
System Manufacturer	HP
System Model	Victus by HP Gaming Laptop 15-fa1xxx
System Type	x64-based PC
System SKU	8P9Q2PA#ACJ
Processor	12th Gen Intel(R) Core(TM) i5-12450H, 2000 Mhz, 8 Core(s), 12 Logical Proc...
BIOS Version/Date	AMI F.18, 8/21/2024
SMBIOS Version	3.6
Embedded Controller Version	63.43
BIOS Mode	UEFI
BaseBoard Manufacturer	HP
BaseBoard Product	8C3F
BaseBoard Version	63.43
Platform Role	Mobile
Secure Boot State	On
PCR7 Configuration	Elevation Required to View
Windows Directory	C:\WINDOWS
System Directory	C:\WINDOWS\system32
Boot Device	\Device\HarddiskVolume1
Locale	United States
Hardware Abstraction Layer	Version = "10.0.26100.1"
User Name	RAHUL\RAHUL
Time Zone	India Standard Time
Installed Physical Memory (RAM)	8.00 GB
Total Physical Memory	7.65 GB
Available Physical Memory	627 MB
Total Virtual Memory	17.6 GB
Available Virtual Memory	9.58 GB

2. Download any official Linux distribution ISO (like Ubuntu or Fedora), and use Rufus or BalenaEtcher to create a bootable USB drive for installation.
Hint: If you don't have a spare USB, use a virtual machine tool like VirtualBox to mount the ISO and start the installation process virtually.

Option 1: Using a USB + Rufus

1. Download an official Linux ISO such as Ubuntu from its official website.
2. Insert an 8 GB or larger USB drive into the computer. Backup the USB first, because Rufus will erase its contents.
3. Download and open Rufus.
4. In Device, select your USB drive.
5. In Boot selection, select the downloaded Linux ISO.
6. Keep the default settings and click Start.
7. Confirm the warning about erasing the USB.
8. Wait until Rufus shows READY.
9. Restart the computer and boot from the USB to start the Linux installation.

3. On a macOS device (or using a macOS virtual machine), open 'System Preferences' and change the desktop wallpaper, then adjust the system language to Hindi or Gujarati.

Hint: Find 'Language & Region' in System Preferences to add or change languages.

Changing wallpaper:

Changing Language:

4. Install a fresh copy of Ubuntu Linux (real or virtual machine) and create a new user account named 'gamer'. After installation, enable automatic login for this user and take a screenshot of the login screen showing the username.

5. Use ChatGPT to generate a step-by-step guide for installing Windows 10 on a laptop, including partitioning tips and post-installation settings for privacy and updates. Follow the guide and note any steps that were unclear or missing.

5. Step-by-Step Guide: Installing Windows 10 on a Laptop

Note: Windows 10 support ended on **October 14, 2025**. For a new installation in 2026, Windows 11 is generally recommended if the laptop supports it. If your assignment specifically requires Windows 10, follow the steps below.

Step 1: Prepare the Windows 10 Installation USB

1. Download the official **Windows 10 ISO**.
2. Use **Rufus** to create a bootable USB drive.
3. Use a USB drive of **8 GB or larger**.
4. Back up important files before starting.

Step 2: Boot the Laptop from USB

1. Insert the bootable USB.
2. Restart the laptop.
3. Open the **Boot Menu** using the appropriate key such as **F12, F9, Esc, or F2** depending on the laptop.
4. Select the USB drive.
5. The Windows Setup screen will appear.

Step 3: Start Windows Installation

1. Select **Language, Time, and Keyboard**.
2. Click **Next → Install Now**.
3. Enter the product key if available.
4. Select the correct **Windows 10 edition**.
5. Accept the license terms.
6. Select **Custom: Install Windows only (advanced)**.

Step 4: Partition the Drive

- **Back up your important data first.**
- Select the drive where Windows will be installed.
- For a completely fresh installation, old Windows partitions can be deleted **only if you are certain they contain no important data.**
- Select the resulting **Unallocated Space** and click **New**.
- Windows will create the required system partitions automatically.
- Select the main partition and click **Next**.

Partitioning tip: If you want separate storage for Windows and personal files, you can create a smaller **C:** partition for Windows and another partition such as **D:** for personal files. Keep enough space on C: for Windows updates and applications.

Step 5: Complete Installation

1. Windows will copy files and restart several times.
2. Do **not** remove the USB until Windows has started the setup process from the internal drive.
3. Choose your region and keyboard layout.
4. Connect to Wi-Fi/Ethernet if required.
5. Create or sign in to your user account.
6. Set a strong password/PIN.

Step 6: Configure Privacy Settings

After reaching the Windows desktop:

1. Open **Settings → Privacy**.
2. Review **Location** permissions.
3. Review **Camera** and **Microphone** permissions.
4. Disable access for apps that do not need these permissions.
5. Review **Diagnostics & feedback** and choose the most privacy-friendly available options.
6. Review **Activity history** and other personalization settings.

Step 7: Install Windows Updates

1. Open **Settings** → **Update & Security** → **Windows Update**.
2. Click **Check for updates**.
3. Install all available updates.
4. Restart the laptop if required.
5. Check again until no further updates are offered.

Step 8: Install Drivers

1. Open **Device Manager**.
2. Check for devices with a yellow warning symbol.
3. Install the required drivers from the **laptop manufacturer's official website**.
4. Install graphics, Wi-Fi, audio, chipset, and other required drivers.

Step 9: Final Checks

- Check that Wi-Fi works.
- Check sound and display.
- Test the keyboard and touchpad.
- Check storage in **This PC**.
- Activate Windows if you have a valid license.
- Create a backup or restore point.

Steps I Found Unclear or Missing

Unclear: The exact Boot Menu key differs between laptop manufacturers, so the laptop model should be checked before installation.

Missing: The guide should clearly warn that deleting or formatting partitions can permanently erase personal data.

Missing: Windows 10's support status should be mentioned because regular support ended on **October 14, 2025**.
